### **Temporomandibular Joint Wikipedia**

January 5th, 2019 - Temporomandibular joint

Temporomandibular joint (TMJ) is a joint in the human body that connects the mandible (lower jaw) to the temporal bone of the skull. It is a synovial joint, which means it is surrounded by a synovial cavity and is lubricated by synovial fluid. The TMJ is located in front of the ear, and it is responsible for allowing the jaw to move up and down, side to side, and forward and backward. It is also responsible for allowing the jaw to open and close. The TMJ is a complex joint, and it is made up of several different parts, including the articular disc, the articular eminence, and the articular surface of the temporal bone. The articular disc is a wedge-shaped piece of cartilage that sits between the two bones of the joint. The articular eminence is a bump on the temporal bone that the articular disc sits on. The articular surface of the temporal bone is the part of the bone that the articular disc sits on. The TMJ is a very important joint, and it is responsible for many of the functions of the jaw. If the TMJ is not working properly, it can cause a variety of problems, including pain, clicking, and locking of the jaw.

### **BonaDent Dental Laboratories**

January 6th, 2019 - BonaDent would like to congratulate Christopher Cowell DMD and his entire team for being named our Premier Practice for December 2018 The cases he collaborates with
